

## ↘ PRINTDATA-ACQUISITION

---

For a project execution on schedule, we printable data. Please regard following parameters:

file formats:	- pdf ( we recommend x4-Standard, ISO Coated v2 ) - eps ( fonts in paths, CS 4 and above ) - tiff ( one layer ) - jpg ( save with HQ )
colour space:	- CMYK, RGB, Pantone, HKS, RAL
size/scale:	- 1:1, 1:10, 1:20 ( resolution life-size: 150 dpi )
marks/bleed:	- no crop marks - bleed all round – 10 mm
colourprofiles:	- ISO Coated v2 (ECI) or eciRGB v2 ( recommended )

We check you printdata for these parameters. If some parameters are incorrect, we have to invoice the costs for creating printable data of 20,- € per print. In any case we request a preview pdf file.

## ↘ PUNCH PRESS

---

If we should produce your print with punch press, please colorize the punch-press-path with a Base Colour and name it „Punch Press“. For a punch press we also need a bleed of approx. 2 mm.

## ↘ COLOUR MATCHING

---

Based on technical parameters we cannot print Base Colours. Also the field of use and the printed substrate affect the colour matching. If you want us to touch up the colour, we need a proof, so we can simulate colour deviation ( Delta E ) from 1,0 - 1,5.
